

SKYPOWER

**IS THE LARGEST AND ONE OF THE MOST
SUCCESSFUL DEVELOPERS AND OWNERS
OF UTILITY-SCALE SOLAR PHOTOVOLTAIC
ENERGY PROJECTS IN THE WORLD.**

SkyPower's Ongoing Commitment to Sustainable Development

In June 2014, SkyPower launched SkyPower Cares with an inaugural contribution of 5,000 solar-powered lights, which were distributed to students in remote communities of South Africa. These lights have a considerable social impact for the students and their families, creating nearly 7.3 million hours of reading light each year, which translates into productive study time.

SkyPower, under the guidance of the Government of Kenya, has committed to donate and distribute two million home solar kits to working families across the nation currently without access to electricity. The portable SkyPower Home solar kits include a solar panel and an inverter to help Kenyans harness the power of the sun. The home solar kits include LED bulbs, a fan, USB charging capabilities and a radio that will be powered and recharged by the sun.
